*Tracing Prehistoric Social Networks through Technology. A Diachronic Perspective on the Aegean*

Edited by Ann Brysbaert

**City & year:** London/New York 2011  
**Publisher:** Routledge  
**Series:** Routledge Studies in Archaeology  
**Description:** Hardback, xi+207 p., b/w and colour illustrations, 23.5x15.8 cm  
**ISBN:** 978-0-415-89616-0  
**Price:** £ 80 (ca. € 94)

**Abstract**

This volume investigates smaller and larger networks of contacts within and across the Aegean and nearby regions, covering periods from the Neolithic until Classical times (6000–323 BC). It explores the world of technologies, crafts and archaeological ‘left-overs’ in order to place social and technological networks in their larger economic and political contexts. By investigating ways of production, transport/distribution, and consumption, this book covers a chronologically large period in order to expand our understanding of wider cultural developments inside the geographical boundaries of the Aegean and its regions of contact in the east Mediterranean.

This book brings together scholars’ expertise in a variety of different fields ranging from historical archaeology (using textual evidence), archaeometry, geoarchaeology, experimental work, archaeobotany, and archaeozoology. Chapters in this volume study and contextualize archaeological remains and explore networks of crafts-people, craft traditions, or people who employed various technologies to survive. Central questions in this context are how and why traditions, techniques, and technologies change or remain stable, or where and why cross-cultural boundaries developed and disintegrated.

The Pottery from Karphi, a Re-examination
Leslie Preston Day

City & year: London 2011
Publisher: The British School at Athens
Series: BSA Studies No. 19
Description: Hardback, 392 p., 2 colour pls, 29 half-tone pls, 158 in-text figs, 4 tables, 30,5x21,5 cm
ISBN: 978-0-904887-63-1
Price: £ 95 (ca. € 112)

Abstract
The site of Karphi, high above the Lasithi plateau, remains one of the most extensively investigated settlements of Early Iron Age Greece; it was excavated by the British School at Athens under the direction of John Pendlebury in 1937-39. In the report that swiftly followed the pottery was not presented in detail, though much was discussed in a later article by Mercy Seiradaki. Consequently there existed serious problems in dating the remains and understanding their meaning. This volume now presents a thorough study of the Karphi pottery, much hitherto unpublished, accompanied by copious new drawings and photographs. The author’s expertise with material from contemporary Cretan sites, especially from the Kavousi excavations, provides major insights. Moreover, thanks to careful recording by the excavators and the survival of the excavation notebooks, the material can be presented here by context, which permits the date of the settlement to be clarified and its history to be re-evaluated. While early pottery appears as small fragments from under floors, streets, and courts, later LM IIIC whole vessels seem to have been abandoned on floors. The tombs continued in use long after the abandonment of the settlement. Ceramic assemblages also help to determine room and building functions, leading to a reconstruction of social practices at this key site. A chapter by Eleni Nodarou and Ioannis Iliopoulos presents the results of petrographic and SEM analyses. Thus, this study serves as a significant contribution to our overall understanding of Early Iron Age Crete.

Abstract

Prof. James D. Muhly has enjoyed a distinguished career in the study of ancient history, archaeology, and metallurgy that includes an emeritus professorship at the University of Pennsylvania and a term as director of the American School of Classical Studies at Athens as well as receiving the Archaeological Institute of America's Pomerance Award for Scientific Contributions to Archaeology. In Muhly’s honor, a total of 38 eminent scholars have contributed 30 articles that include topics on Bronze and Iron Age metallurgy around the Eastern Mediterranean in such places as Crete, the Cyclades, Cyprus, and Turkey.

Χρόνια Ανασκαφικής Έρευνας και Μελλοντικές Προοπτικές. Με επίκεντρο τόσο τις διαχρονικές εκφάνσεις του πολιτισμού της Ικαρίας, υλικών και άυλων, όσο και την ιστορία της αρχαιολογικής έρευνας καθετουθήν, οι ανακοινώσεις αυτές καλύπτουν ένα ευρύ χρονολογικό φάσμα, που εκτίνεται από την Προϊστορική περίοδο έως τους νεότερους χρόνους.

Νέα κινητά και ακίνητα μνημεία που προέκυψαν από τις αρχαιολογικές έρευνες των τελευταίων ετών παρουσιάζονται για πρώτη φορά στο ευρύ κοινό, ενώ παλαιότερα ευρήματα, που επί μακρόν ταλάνιζαν αρχαιολόγοι και ιστορικοί της τέχνης, εξετάζονται και αναλύονται υπό το φως νέων δεδομένων. Τέλος συνοψίζεται το αρχαιολογικό έργο που έχει συντελεστεί στην Ικαρία έως σήμερα.

Abstract (from the preface)

Once upon a time – in early 2005 – when the Minoan Seminar was still under the auspices of the Danish Institute at Athens, Tom Brogan mentioned that it might be a good idea to have a workshop on LM IB pottery focusing on the disagreement and unsolved problems connected with recent excavations in East Crete. We talked about it a couple of times without doing much, but then during the summer of 2006 we started to ask around and found that the time was ripe for such a workshop. We were particularly fortunate because the timing of the 10th Cretological Congress in Khania allowed us to discuss the matter with our colleagues who were not resident in Greece. After many positive reactions we started to plan. Because it had to be a low-budget workshop, we chose late June 2007 when most excavators with knowledge of LM IB pottery would be in Greece and accommodations in Athens would not be so difficult to arrange.

With the experience from the LM III pottery workshop held at the Danish Institute in 1994, we decided to invite excavators with unpublished, stratified LM IB deposits as speakers. Each speaker would also have a respondent who was an excavator with unpublished LM IB material so that they could use the experience and knowledge from their own excavations in preparing their responses. In the few cases where we could not find excavators with LM IB material as respondents, we invited scholars who were experienced in the topic. As with the LM III pottery workshop, there were no strict time limits for any of the presentations. For three days, from the 27th to the 29th of June 2007, 30 scholars presented their material and responded to questions from a wider audience in an informal and relaxed atmosphere, and there was plenty of discussion after each of the presentations.

2. NEW ARTICLES

2.1. ‘Antonino Di Vita e Creta’
Vincenzo La Rosa
Aegean Library: -

Abstract
This paper aims at outlining A. Di Vita as a man, as a scholar, as an excavator and as director of the Italian Archaeological School in Athens, stressing his privileged relationship with the Island of Crete, both due to the excavations conducted by him in Gortina (from 1977 to 2009), but also on account of the support which he provided, as Director of the Italian School, for the excavations conducted at Phaistos and Prinias. The last two relevant episodes of his activity as Director of the Italian School are also linked to Crete and regard the construction of the house and storerooms of the school in Gortina and the organization of the international conference on Roman and Proto-Byzantine Crete.

2.2. ‘Osservazioni sulla Cronologia del Secondo Palazzo di Festòs’
O. Palio
Aegean Library: -

Abstract
This article examines some assemblages that are almost certainly associated with the construction of the Second Palace, with a special focus on the one uncovered under room 18 of this Palace. Examination of the relevant contexts has allowed D. Levi’s hypothesis that there were two phases in the life of the Second Palace, documented by two floor levels in the rooms located along the west façade, to be dismissed. Comparison with the ceramic sequences identified at Kommos and Ayia Triada, has allowed the assemblages from Phaistos (and therefore the construction of the Second Palace) to be dated to a ripe phase of LM IB.

2.3. “Rhytoid” Digressions from the Mesara’
Vincenzo La Rosa
Aegean Library: -

Abstract
This paper focuses on some rhyta from Phaistos, Ayia Triada and Kommos, which date mainly to the MM III period. After a brief review aimed at clarifying some major typological and functional issues of this category of evidence, the various types identified in the three sites are contrasted with one other with the aim of identifying meaningful patterns in their geographic and chronological distribution. This comparison highlights (a) that rhyta are only scarcely attested in the MM II period, with a concentration of evidence at Phaistos, which was the location of a palace; and (b) that in MM IIIA Kommos is the only site where all the types known (globular, conical, ostrich-egg, alastroid/piriform, bull’s head) are attested, with an overall number of specimens that exceeds by far those of the other two sites, although the bull-head type seems to be specific to Ayia Triada and Phaistos. This pattern of distribution allows a relationship to be hypothesised between the rhyta and the structures of power, and suggests that during MM IIIA and the
first part of MM IIIB Kommos and its building T became the administrative capital of the Mesara, while at the end of that period the baton was passed to the villa at Ayia Triada. A symbolic-psychoanalytic interpretation of the different types of rhyta is also proposed, assuming that their main function of pouring could somehow symbolise the vital course of the individual, from a perspective of gender representation.

2.4. ‘Dal “Vassoio Tripodato” al Kernos. Un Set di Ceramiche TM IA da Hagia Triada e il suo Contributo alla Conoscenza del Rituale Minoico’
D. Puglisi

Abstract
In 1985, during stratigraphical soundings carried out by V. La Rosa in the north sector of the Hagia Triada settlement, remains of a house destroyed by fire at the beginning of LM IA were brought to light under the floor of room C of the LM III A monumental Edificio Ovest. The best preserved sector of the LM IA house was a small rectangular room named C/2, partially covered by the later structures and 1.65 m in width on its east-west axis in its better preserved southern part. In its southeast corner, 21 vases and 8 stone tools were found around and upon a large high slab (0.30 x 0.25 m) placed on the floor, while the deep destruction layer of the house also yielded four loom weights and fragments of two potter’s wheels. Since the discovery, some of the vases from room C/2 appeared to be of clear ritual destination on account of their typological features and dimensions. The most obvious ritual tool was the tripod tray HTR 1060, after which the house was named Casa del Vassoio Tripodato.

2.5. ‘Linear B ki-ta-no and Textile Production at Knossos in the Mycenaean Period’
Santo Privitera

Abstract
The interpretation of the Linear B term ki-ta-no, which is uniquely attested in the tablets belonging to the set Ga(5) at Knossos, has been much debated since the decipherment of Linear B and is still contentious. In this paper, the texts registering this term are analyzed anew and their major peculiarities are highlighted. Moreover, drawing on former studies by E. Foster and on a comparative analysis of the Linear B texts from Pylos referring to linen textiles and the SA commodity, a new interpretation is put forward, according to which ki-ta-no would represent the Mycenaean adaptation of the Minoan term tor flax, possibly attested on a Linear A inscription incised on a pithos from Petras Sitias. If accepted, this identification would imply that flax bundles were measured by volume in litres at both Knossos and Pylos, rather than being weighed, as was formerly believed.

2.6. ‘A wall bracket from Phaistos’
Luca Girella

Abstract
The article discusses the wall bracket found at Phaistos by Luigi Pernier. The object was dated to historical time and published by the excavator without proper description together with other prehistoric vessels. Wall brackets are extremely rare in Greece; however, the increasing number of
wall brackets in the Aegean and Greek mainland (especially at Tiryns) allows speculating on the chronology and the function of this isolated item. It is argued that the Phaistian wall bracket arrived in Crete between the end of Late Minoan IIIB and the beginning of IIIC, when wall brackets spread in the Mycenaean world. Finally, the paper discusses the hypotheses that the object reached southern Crete directly via Cyprus or through a Greek mainland intermediate.

2.7. ‘The Reception of the «Minoans» in the Modern Art of Mariano Fortuny y Madrazo’
Ilaria Caloi
_Aegean Library: Dig. Caloi 2010_

 Abstract

This paper deals with the Minoan inspired motifs in the textile production, mostly scarves and wall-hangings, of Mariano Fortuny y Madrazo, known as «Knossos scarves» and dated between 1906 and 1930. Fortuny’s textile creations are examples of conscious reception of Minoan art, as his unpublished notes and some of his sketches have revealed: he wrote some notes about his purpose to print Minoan motifs, as well as he reproduced many sketches of Minoan decorative motifs, declaring his main sources of inspiration. These are various painted pottery and frescoes motifs known from British and Italian excavations (Phaistos, Knossos, Ayia Triada, Zakros, Gournia) and taken from archaeological publications such as the 1906 paper of Arthur Evans named _Prehistoric Tombs of Knossos_ and the _Escursioni nel Mediterraneo e gli scavi di Creta_ by A. Mosso (1907), but also archaeological periodicals such as _BSA, JHS_ and _MonAnt_, to which Fortuny came across during his stay in Paris (1901-1906).

Fortuny represents an exemplary case of Modern artist employing the Minoan art and «fashion» to satisfy his needs and desires. Since in the early 20th century, in the context of the Modern Style avant-garde, the recently discovered Minoan civilisation was characterized as a «new» and «modern» culture, Fortuny’s textile creations reflect his desire to remind to concepts of freedom and spontaneity, and mostly to the idea of elegance and «modernity».

2.8. ‘An ivory rod with a cuneiform inscription, most probably Ugaritic, from a Final Palatial workshop in the lower citadel of Tiryns’
C. Cohen, J. Maran & M. Vetters
_Archäologischer Anzeiger_ 2010/2: 1-22.
_Aegean Library: Dig. Cohen et al. 2010_

 Abstract

The subject of this contribution is the fragment of an ivory rod with six cuneiform signs that was found in 2002. The rod came to light in a destruction layer dating to LH III B Final within a workshop for skilled crafting inside Building XI which is situated in the northernmost part of the Lower Citadel of Tiryns. The inscription is interpreted as the first example of an Ugaritic text found outside of the Levant. The text is written from left to right combining Akkadian logographic numerical signs and at least one letter of the regular Ugaritic alphabet. After discussing different possibilities concerning the object’s function, an interpretation as a ‘tally stick’ is proposed, i.e. a mnemonic device to document numbers, quantities or possibly a message, that was used by Levantine or Cypriote specialists for skilled crafting who were working in Building XI on behalf of the palace. The find assemblage in Building XI serves as a reminder that it would be highly misleading to regard oriental objects like the ivory rod with cuneiform signs or wall brackets appearing in a Mycenaean harbor town such as Tiryns as mere ‘exotica’. Instead, contextual analysis demonstrates that the users were well aware of the
special significance attached to such objects in the east and employed them in accordance with practices of Near Eastern or Cypriote origin, thus signaling their cultural affiliations.

2.9. ‘The roots of the Cretan Polis. Surface evidence for the history of large settlements in central Crete’
Saro Wallace
Archäologischer Anzeiger 2010/1: 13-89
Aegean Library: -

Abstract
Classical Cretan states are known to have had an unusual and distinctive character, contrasting markedly with that of their central Greek peers. Yet the histories of the latter have tended to dominate our understanding of the polis form. The factors contributing to this difference, and to the whole process of state emergence in Early Iron Age-Archaic Crete, have not been much analysed, restricting our understanding of the origins of the earliest consensualist political structures. Some scholars have explained Cretan divergence in terms of a particularly strong ‘continuity’ in the island’s social and cultural frameworks from the Bronze Age into the state formation period. Others have seen immigration into Crete during the latter period as a major constructive influence (frequently citing some aspects of Archaic-Classical texts in support of their arguments). The EIA-A archaeological record should be our main source of information in testing these models, but has been under-investigated in many respects, encouraging both an over-reliance on textual traditions, and generalisations based on too narrow a sample of sites and types of archaeological material. New excavation projects are starting to expand the frame of study. However, while many of the ancient text sources refer to central Crete, there remains a limited range of published archaeological data from this core development region against which to evaluate them. The paper uses surface ceramics from five large central Cretan settlements, collected by scholars from the British School at Athens in the 1930s-60s, together with observations from more recent visits to the sites, to help develop a more archaeologically-informed narrative of large polity emergence and development in this region, and the island as a whole.

2.10. ‘The chronology of Greek bronze tripods of the geometric type and the possibilities of a political-historical interpretation of the find distribution’
Moritz Kiderlen
Archäologischer Anzeiger 2010/1: 91-104.
Aegean Library: -

Abstract
Bronze tripods were particularly suitable as a means of formulating social status since they were one of the most prestigious types of movable items and because of their character as an exchange item with a value easy to assess. Offerings of bronze tripods occur by no means in all (Proto-)Geometric sanctuaries but only in a few selected ones, and there often in abundance. Many of these sanctuaries in later are either principal urban area sanctuaries of major population nuclei or poleis, or extra-urban central sanctuaries of ethnic groups (tribes), regions, islands or major poleis, or extra-urban Panhellenic sanctuaries. These results reveal furthermore that tripod dedications indicate the meeting point of an elite. The process of development of elite publics becomes now easier to date. In the transition from the late Bronze Age to the early Iron Age there was no break in tripod production; the so-called massive tripods with faceted rectangular or polygonal legs forming slight fronts facing the viewer, were produced already from the end of the 11th century. The known clay mould fragments from Lefkandi, which are stratigraphically datable to the end of the Euboean late Protogeometric...
period (c. 900), come from the production of a Π-shaped leg of a so-called relief tripod. Olympia and Delphi, for example, must therefore have been regional centers from the late 11th or early 10th century.

2.11. ‘That special atmosphere outside of national boundaries”: Three Jewish directors and the American School of Classical Studies at Athens’
Jack L. Davis
Aegean Library: -

From the introduction
By the start of WWII, members of ASCSA had long been committed to public service in Greece, especially as it concerned the needs of refugees and the victims of disasters. In 1918-1919, Edward Capps, professor of Classics at Princeton University and newly elected Chair of the Managing Committee of ASCSA, took temporary leave from the latter post to lead a Red Cross mission to Greece. Many at ASCSA were enlisted in the mission, including Bert Hodge Hill, the director, and Carl W. Blegen, the assistant director. In Macedonia the Bulgarian retreat in the wake of the armistice at the end of WW I had wreaked havoc. Thousands of ethnic Greeks were homeless and without resources as they returned from Bulgaria where they had been taken as hostages. The plight of the Jews in Thessaloniki was a special concern since many had previously been left destitute as a result of the great fire that destroyed much of the ghetto in 1917.

2.12. ‘The Swedish fieldwork at Dendra and Midea
Ann-Louise Schallin
Aegean Library: -

Abstract (from the introduction)
It all started in 1926 when Axel W. Persson and Otto Frodin conducted excavations at Asine. The Asine excavations had been initiated by the Crown Prince of Sweden, Gustaf Adolf, who visited the site in 1920 and was taken in by the beautiful setting. At the time, French archaeologists had already done preliminary work here. Back in Athens, the Crown Prince visited the French School, where the Swedish classicist Axel W. Persson was conducting his studies. The Crown Prince introduced Persson to his idea and they both agreed to try launching an excavation project. It became Persson’s task to persuade the French to leave their excavation rights to the Swedes as well as to convince the Greeks to give the Swedes a permit for excavation. Persson was successful in both respects. In Sweden, the Asine Committee was created with the Crown Prince as chairman of the board, its aim being of course the support of the new archaeological project. After some preparations the first campaign could begin and this was in 1922. Persson was a successful archaeologist, even though he actually had no excavation experience before the Asine project.

2.13. ‘Dodecanese - Italy - Europe. Rediscovering some long known objects’
Mario Benzi
Aegean Library: -

From the introduction
One the most conspicuous innovations marking the end of the Late Bronze Age (LH IIIB late-IIIC) in the Aegean is the sudden appearance and growing popularity of bronze objects of Italian/European
origin and/or influence. They have a widespread though uneven distribution on the Greek Mainland, Crete, and the islands of the central Aegean, while the eastern Aegean as well as the western coast of Anatolia seem to have been less involved in that flow of new ideas and objects coming from areas north and west of the Aegean. Although recent finds from Troy and Rhodes have produced a handful of new "European" objects, the list of such objects found so far in the area remains meagre. This is quite surprising, for some of the earliest European-type bronzes come from eastern Aegean contexts.

2.14. ‘Les cultes du Ptoion dans les tablettes en lineaire B de Thèbes’
Anna Sacconi
Aegean Library: -

From the Introduction (in French)
L’École Française d’Athènes a fouillé deux sanctuaires du Ier millénaire sur le Ptoion : le sanctuaire du héros Ptoios situé sur la butte de la colline de Kastraki pres de Karditza, à quelque 2 km de la ville d’Akraiphia, fouillé par P. Guillon. et le sanctuaire d’Apollon Ptoios au lieu dit Perdikovrysi (nom qui en grec moderne signifie ‘source des perdrix’), à 1500 m de distance de l’héroon, fouillé par M. Holleaux. Les découvertes archéologiques du Ptoion nous montrent avec beaucoup de netteté l’existence au Ve siècle av. J.-C. de deux cultes et de deux sanctuaires séparés, l’un consacré au héros Ptoios et l’autre au dieu Apollon, l’un à Kastraki et l’autre à Perdikovrysi. À Kastraki toutes les offrandes dont la destination nous est connue sont consacrées au héros Ptoios; à Perdikovrysi elles le sont à Apollon. On peut tenir le culte du héros Ptoios, limité à la région d’Akraiphia, qui ne paraît jamais avoir dépassé les confins de la Béotie, pour un culte local. Les traditions s’accordent bien à faire du héros Ptoios un héros béotien et plus proprement un héros de la Béotie du nord-ouest que les diverses versions de la généalogie rattachent à Athamas, c’est-a-dire au souvenir de l’époque préhellénique.

**Chronika**

*Chronika*, a new interdisciplinary journal of European and Mediterranean archaeology, welcomes submissions (2,500-3000 words) from graduate students in departments of Anthropology, Classics, and Visual Studies/Art History at any university. Students are encouraged to submit online, and to join Chronika’s parent organization, The Institute for European and Mediterranean Archaeology.

Further information and submission and membership forms are available at [http://chronika.yolasite.com/](http://chronika.yolasite.com/).
6. AEGEUS’S NEWS

Operation Tax- an unfair Greek law

The Greek Government has recently imposed to our Society a new tax law, the so-called ‘operation tax’. According to the law 3986/2011 (article 31) the current government calls on all non-Profit organisations to contribute to a ‘operation tax’ of 300 euros for the current economic year and raised to up to 500 euros in the next economic year. But what is really causing a harsh impression to our Committee is the fact that all organisations and societies of different statuses and values are called to pay the exact same amount without their annual profits and incomes taken to consideration. As a result of which non-profit organisations will pay the same amount with organisations of considerable annual income and profits. Undoubtedly a number of non-profit organisations will be forced to cease their activities or even declare bankruptcy.

Aegeus would like to declare that up to day has not received any kind of state contribution or does not have any other income from profit-related companies and is therefore only sustained by the contributions of his members as well as the generous donations of his Committee members towards the scopes and actions of the Society. Moreover, certain research activities of Aegeus have been funded entirely by non-state charities and organisations. Unfortunately, Aegeus was born in the midst of the current Greek economic crisis. Nonetheless, during his three years of operation has achieved to contribute to the academic and research community of Aegean Prehistory and related studies with minimal funding. We believe that the use of his few economic resources for increasing tax contributions, when they were destined for research activities, is unfair.

However, we are confident that such unfair government decisions will not manage to cease our operations and that we will continue to support the dissemination of knowledge in the field of Aegean Prehistory and related studies, as well as to contribute to the preservation of our cultural heritage, particularly during those challenging times.

DISSERTATIONS

Theodoros G. Giannopoulos
Ruprecht-Karls University of Heidelberg 2007

The aim of the present study is to examine the historical development of Achaea in the Mycenaean period, i.e. the landscape of the north-western Peloponnese that preserved in its place-name up to the present day the designation of a much larger and much more important part of Late Bronze Age Greece. The book is divided into three parts. The first part has been devoted to the detailed and systematic overview of the natural environment, the ancient sources, and the Mycenaean research history of Achaea. This is followed by a comprehensive list of the hitherto examined Mycenaean sites, as well as by a critical examination of the present state of research. The underlying goal is to provide the increasing number of scholars interested in Achaeas’ prehistoric and particularly Mycenaean archaeology with a reliable starting point and a solid framework for further research.

14th International Aegean Conference. PHYSIS. Natural environment and human interaction in the prehistoric Aegean
University Paris 1, Panthéon-Sorbonne, 11-14 December 2012
Deadline: 15 January 2012

Over the last decades, archaeological research, though especially concerned with the study of material culture, has expressed an increasing interest in the palaeoenvironment. Aegean archaeology is no exception to this trend. Pluridisciplinary research projects have been initiated in different geographical areas, associating survey and excavation with studies on natural environment, fauna, flora, climate, landscape change and various forms of interaction between ancient societies and their environment.

Η εφεδρεία αποψιλώνει την Αρχαιολογική Υπηρεσία

P. Krimnioti, Αυγή, 6-12-2011

Ενώ οι αρχαιολόγοι αλλά και οι εργαζόμενοι όλων των υπόλοιπων ειδικοτήτων οδηγούνται στην έξοδο από την Αρχαιολογική Υπηρεσία, οι θέσεις τους "δεν πρόκειται να αντικατασταθούν", κυρίως όμως "το μέτρο της εφεδρείας δεν πρόκειται να επιφέρει κανένα οικονομικό αντίκρισμα στο κράτος".

Κραυγή αγωνίας αλλά και έντονη ανησυχία για την τύχη της Αρχαιολογικής Υπηρεσίας και το μέλλον των αρχαιολογικών χώρων και των μουσείων της χώρας, έτσι όπως προδιαγράφεται, αρχικά, από το μέτρο της εφεδρείας, εξέπεμψαν μια ακόμη φορά χθες οι Έλληνες αρχαιολόγοι.

Αρχαιολογικός χώρος στο όρος Βρύσινα του Ρεθύμνου

flashnews.gr, 17-11-2011

Ομόφωνα ενέκρινε το Κεντρικό Αρχαιολογικό Συμβούλιο την κήρυξη του αρχαιολογικού χώρου την περιοχή του όρους Βρύσινα, στο Ρέθυμνο της Κρήτης, μετά τις φετινές ανακαλύψεις, αποκορύφωμα των οποίων ήταν η σφραγίδα με την αρχαίτερη γραφή των μινωιτών, την ιερογλυφική. Ο νέος αρχαιολογικός χώρος θα καταλαμβάνει έκταση 672 στρεμμάτων.

Πρόκειται για το σημαντικότερο ιερό κορυφής της δυτικής Κρήτης, που λειτούργησε από την παλαιοανακτορική περίοδο (1900-1700 π.Χ) μέχρι και το τέλος της μινωικής εποχής (1450-1050 π.Χ.) και το οποίο έχει δώσει μέχρι σήμερα εξαιρετικά ευρήματα.

Μόνο φέτος, κατά την τελευταία ανασκαφική περίοδο, που πραγματοποιήθηκε στη βόρεια και βορειοανατολική πλαγιά από τις 4 έως τις 15 Ιουλίου 2011, εντοπίστηκαν σχεδόν 820 ειδώλια, ανθρωπόμορφα, γυναικεία και ανδρικά, αρκετά ζωόμορφα -ορισμένα από τα οποία μικρογραφικά- καθώς και σημαντική ποσότητα κεραμικής.

World’s Oldest Fish Hooks Show Early Humans Fished Deep Sea

livescience.com, 24-11-2011

The world’s earliest known fish hooks reveal that humans fished the open sea for much longer than previously thought. Past studies have revealed that early humans were capable of crossing the open ocean as far back as 50,000 years ago, such as they did to colonize Australia. Until now, however, evidence that such mariners could fish while in the open sea dated back only to 12,000 years ago.

Ancient horses' spotted history reflected in cave art
Jennifer Carpenter, BBC News, 07-11-2011

Scientists have found evidence that leopard-spotted horses roamed Europe 25,000 years ago alongside humans. Until now, studies had only recovered the DNA of black and brown coloured coats from fossil specimens. New genetic evidence suggests "dappled" horses depicted in European cave art were inspired by real life, and are less symbolic than previously thought. The findings are published in the Proceedings of the National Academy of Sciences. Horses, which were the most abundant large mammal roaming Eurasia 25,000 years ago, were a key component of early European diets. So it is not surprising that the cave art of this time had a certain equestrian flair - horses make up 30% of the animals depicted in European cave paintings from this era.

Προστασία και ανάδειξη Πελλάνας Λακωνίας

Αρχαιολογία και Τέχνες, 8-12-2011

Με 100.000 ευρώ θα ενισχυθεί η Ε’ Εφορία Προϊστορικών και Κλασικών Αρχαιοτήτων Σπάρτης για το 2012, μετά από απόφαση του Περιφερειάρχη Πελοποννήσου κ. Πέτρου Τατούλη, με σκοπό την προστασία και ανάδειξη του αρχαιολογικού χώρου στην Πελλάνα Λακωνίας. Μετά τις ανασκαφές της αρχαιολογικής υπηρεσίας η Πελλάνα έχει αναδειχθεί ως εξαιρετικά σημαντικός αρχαιολογικός χώρος και ως εκ τούτου απαιτείται η δέουσα και σταθερή παρουσία της πολιτείας προκειμένου να προστατευθεί καταλλήλως και να αναδειχθεί πλήρως το αρχαιολογικό υπόβαθρο της περιοχής. Έτσι, κ. Τατούλης προέβη στην απόφαση να χρηματοδοτήσει την τοπική ΕΠΚΑ, λόγω των απαραίτητων εργασιών που πρέπει να τελεστούν για τη συντήρηση, προστασία και ανάδειξη ενός πολύ σημαντικού αρχαιολογικού χώρου, με πληθώρα σπουδαίων αλλά και εντυπωσιακών ευρημάτων.
